

Term project

Shopping mall website:

For an internet shopping website, there should be at least three parts: main page, product pages, and cart page.

Main page:

The main page should have the introduction, and links to all the product pages.

Product page:

There should be at least 12 different product pages (12 products), and each product page should contain price and product detail, and images. There should be a button for adding product to cart.

Cart page:

The cart page should list all the products added to cart, also calculate and display the total price for all products in the cart. There should also remove button for removing product from the cart.

Coding:

The website can be written using HTML, CSS and Javascript.

Submission and Grading

Submit your source code for your implementation through blackboard. Please compress your source code folder to zip file, and attach to blackboard. Please make sure all the path in the webpage set up correctly. Your program will be graded as follows:

50% = Correctness, 25% = Design, 25% = Style,
+ 10% = Possible bonus for advanced program
